Un'energia pulita, rinnovabile, ma anche sicura e gratuita. Come quella prodotta dai pannelli solari termici e fotovoltaici. Una tecnologia che fornisce un contributo importante per la tutela dell'ambiente: basti pensare quanta energia si possa risparmiare impiegando queste due tipologie di pannelli e i notevoli vantaggi ad essa associati (miglioramento della qualità della vita, taglio alla bolletta dell'elettricità e del gas). L'installazione sul tetto di una qualsiasi casa di otto metri quadri di pannelli fotovoltaici, permette, infatti, di abbattere per almeno 25 anni la spesa necessaria per l'energia elettrica.

Inoltre un pannello solare termico è in grado di far risparmiare, durante tutto l'anno, oltre il 60% del combustibile necessario per ottenere acqua calda per usi domestici.
